Product Description

The 3D Chair collection by Komplot Design is the first furniture design to be based on the innovative technique of molding three-dimensional veneer. The 3D design gives the chair a comfortable seat and a sense of lightness as all edges are pointing away from its user. The stunning design encourages for personalization with numerous base options as well as an inviting upholstered front in a fabric or leather of personal choice. In this way, the chair explores the contrast between soft and hard. Since its launch in 2003, the chair has won several design awards and is included in the permanent exhibition at the Museum of Modern Art (MoMA) in New York. The chair seat is available in Hi-Rek Plastic, wood, seat, and back upholstered or fully upholstered. The chair collection includes various base options: swivel, wood, metal or sled. Plastic glides included, felt glides available on request. Available for use in contract or high traffic areas. The Collection includes chairs, stools, and lounge chairs.
