Product Description

The 3D Stool by Komplot Design is the first furniture design to be based on the innovative technique of molding three-dimensional veneer or hi-rek material. The 3D design gives the stool a comfortable seat and a sense of lightness as all edges are pointing away from its user. The stunning design encourages for personalization with numerous base options as well as an inviting upholstered front in a fabric or leather of personal choice. In this way, the bar stool explores the contrast between soft and hard. The furniture design has been awarded in several prestigious design awards and is included in the permanent exhibition at the Museum of Modern Art (MoMA) in New York. The stool seat is available in Hi-Rek Plastic, wood, seat upholstered or fully upholstered. The stool collection includes various base options: swivel, wood, metal or sled. Plastic glides included, felt glides available on request.

Available for use in contract or high traffic areas. The Collection includes chairs, stools, and lounge chairs.

Quick Ship available
